Continuation of Attachment(s) 6). Other: Notice to Comply; Notice of Non-Compliant Amendment.

DETAILED ACTION

1. The amendment filed December 7, 2004, is acknowledged and has been entered. Claims 3-5, 11, and 15-17 have been amended.
2. The amendment filed January 13, 2006, is acknowledged and has been entered.
3. The amendment filed August 16, 2006, is acknowledged and has been entered in part.
4. Claims 1-17 are pending in the application and are currently subject to restriction.

Response to Amendment

5. The amendment filed on August 16, 2006, is considered non-compliant because it fails to meet the requirements of 37 CFR § 1.121, as amended on June 30, 2003 (see 68 *Fed. Reg.* 38611, Jun. 30, 2003). However, in order to advance prosecution, rather than mailing a Notice of Non-Compliant Amendment, Applicant is advised to correct the following deficiencies in replying to this Office action:

The amendment to the claims is non-compliant because the status identifiers of claims 3-5, 11, and 15-17, which appear in parentheses, do not properly indicate that the claims have been amended; moreover, the claims presented do not show the changes that have already been made in accordance with the amendment filed December 7, 2004.

Applicant is reminded: Only the corrected section(s) of the non-compliant amendment must be resubmitted (in its entirety), e.g., the entire "Amendments to the claims" section of applicant's amendment must be re-submitted. 37 CFR § 1.121(h).

Specification

6. The disclosure is objected to for the following reason: The specification contains sequence disclosures that are encompassed by the definitions for nucleotide and/or amino acid sequences set forth in 37 C.F.R. § 1.821(a)(1) and (a)(2). Sequences appearing in the specification and/or drawings must be identified by sequence identifier in accordance with 37 C.F.R. 1.821(d). According to 37 CFR § 1.821(a), an unbranched sequence of four or more specifically identified amino acids or an unbranched sequence of ten or more nucleotides must be identified by sequence identification numbers. See MPEP § 2422.01.

In this instance, the sequence "FSLYK", which is depicted in the paragraph beginning in line 25 at page 32, is not identified by a sequence identification number.

Applicant must provide appropriate amendments to the specification and/or drawings inserting the required sequence identifiers. Sequence identifiers for sequences appearing in the drawings may appear in the drawings or in the brief description of the drawings.

As noted in the attached Notice to Comply, appropriate action correcting this deficiency is required. If necessary to correct the deficiency, Applicant must submit paper and computer-readable copies of a substitute sequence listing, together with an amendment directing its entry into the specification and a statement that the content of both copies are the same and, where applicable, include no new matter.

Election/Restrictions

7. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I. Claim(s) 4, insofar as the claim is drawn to a method for inhibiting or reducing the proliferation of prostate cancer cells, or to a method for treating prostate cancer, said method comprising administering to the cells or to a subject in need of treatment a cPLA₂- α inhibitor.

Group II. Claim(s) 10, insofar as the claim is drawn to a method for inhibiting or reducing the proliferation of prostate cancer cells, or to a method for treating prostate cancer, said method comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is cFLSYK.

Group III. Claim(s) 10, insofar as the claim is drawn to a method for inhibiting or reducing the proliferation of prostate cancer cells, or to a method for treating prostate cancer, said method comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is cFLSYR.

Group IV. Claim(s) 10, insofar as the claim is drawn to a method for inhibiting or reducing the proliferation of prostate cancer cells, or to a method for treating prostate cancer, said method comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is c(2NapA)LS(2NapA)R.

Group V. Claim(s) 11, insofar as the claim is drawn to a method for inhibiting or reducing the proliferation of prostate cancer cells, or to a method for treating prostate cancer, said method comprising administering

Art Unit: 1643

to the cells or to a subject in need of treatment a cPLA₂- α inhibitor and a cPLA₂-IIA inhibitor.

Group VI. Claim(s) 16, insofar as the claim is drawn to a method for detecting prostate cancer or metastases thereof in a subject, said method comprising determining a level of a cPLA₂- α mRNA.

Group VII. Claim(s) 17, insofar as the claim is drawn to a method for detecting prostate cancer or metastases thereof in a subject, said method comprising determining a level of a cPLA₂-IIA mRNA.

Group VIII. Claim(s) 13, insofar as the claim is drawn to a method for detecting prostate cancer or metastases thereof in a subject, said method comprising determining a level of a cPLA₂ polypeptide.

Group IX. Claim(s) 14, drawn to a method for assessing the predisposition of a subject to prostate cancer, said method comprising determining the presence of a polymorphism or an epigenetic change in a cPLA₂ gene of the subject.

8. Claims 1-3 are linking claims, linking the inventions of Groups I-V, whereas claims 5-9 link only the inventions of Groups II, III, and IV. Claims 12 and 15 are linking claims, linking the inventions of Groups VI and VII. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s). Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim depending from or otherwise including all the limitations of the allowable linking claims will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims are presented in a continuation or divisional

Art Unit: 1643

application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

9. The inventions listed as Groups I-IX do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The inventions of Groups I-IX appear to be linked by a common concept, or special technical feature, namely contacting prostate cancer cells with a PLA₂ inhibitor, so as to inhibit the proliferation of the cells, as recited in claim 1. However, Herrmann et al. (*Exp. Cell Res.* 1997; **234**: 442-451) teaches contacting prostate cancer cells with a PLA₂ inhibitor (i.e., AACOCF₃), so as to inhibit the proliferation of the cells; see entire document (e.g., page 445, Figure 3). Accordingly, the technical feature that appears to link the inventive concepts of the inventions of Groups I-IX does not constitute a special technical feature as defined by PCT Rule 13.1, as it does not define a contribution over the prior art.

The special technical feature of the invention of Group I is inhibiting or reducing the proliferation of prostate cancer cells, or treating prostate cancer by a process method comprising administering to the cells or to a subject in need of treatment a cPLA₂- α inhibitor.

The special technical feature of the invention of Group II is inhibiting or reducing the proliferation of prostate cancer cells, or treating prostate cancer by a process comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is cFLSYK.

The special technical feature of the invention of Group III is inhibiting or reducing the proliferation of prostate cancer cells, or treating prostate cancer by a process comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is cFLSYR.

The special technical feature of the invention of Group IV is inhibiting or reducing the proliferation of prostate cancer cells, or treating prostate cancer by a process comprising administering to the cells or to a subject in need of treatment a cPLA₂-IIA inhibitor, wherein said cPLA₂-IIA inhibitor is c(2NapA)LS(2NapA)R.

The special technical feature of the invention of Group V is inhibiting or reducing the proliferation of prostate cancer cells, or treating prostate cancer by a process comprising administering to the cells or to a subject in need of treatment a cPLA₂- α inhibitor and a cPLA₂-IIA inhibitor.

The special technical feature of the invention of Group VI is detecting prostate cancer or metastases thereof in a subject by a process comprising determining a level of a cPLA₂- α mRNA.

The special technical feature of the invention of Group VII is detecting prostate cancer or metastases thereof in a subject by a process comprising determining a level of a cPLA₂-IIA mRNA.

The special technical feature of the invention of Group VIII is detecting prostate cancer or metastases thereof in a subject by a process comprising determining a level of a cPLA₂ polypeptide.

Art Unit: 1643

The special technical feature of the invention of Group IX is assessing the predisposition of a subject to prostate cancer by a process comprising determining the presence of a polymorphism or an epigenetic change in a cPLA₂ gene of the subject.

Accordingly, the inventions of Groups I-IX do not share the same or corresponding special technical feature so as to form a single general inventive concept under PCT Rules 13.1 and 13.2.

10. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

11. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship

Art Unit: 1643

must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
